

MINI-IO + Active DI Kit

Expand the capabilities of your SC-1 preamp by getting the MINI-IO + Active DI Kit. This kit adds Polarity Reversal switch, -20dB Pads, and a Mic/Hi-Z Instrument select switch. There is also an on-board ACTIVE DI that one beta tester compares the sound to his favorite Active DI from another company (starts with the letter "R"...), which makes this MINI-IO Kit a bargain, considering the other DI costs 4x as much.

You can also adapt this for use in your own DIY preamp or project. See the Assembly Guide/Instructions for the block diagram to see how it sits "in-between" your preamp and XLR jacks. Features:

- High-quality PCB, compact size, plated through holes, double-sided
- Push Buttons with customizable color button caps
- Polarity Reverse Switch
- -20dB Pad Switch
- Mic/Instrument Select Switch
- ACTIVE DI, with true balanced outputs.
- 1/4" Hi-Z inputs
- RFI protection
- Easy connection to existing preamp like the SC-1 Kit
- Uses 18-0-18V DC power (use our PSU-1848 PSU Kit)
- Headers are 0.1" spacing. Optional use of standard PCB connector headers.

Download PDF file of Assembly Guide/Kit Instructions.

Only \$49 per kit
